DETAILED ACTION

1. The Final rejection mailed March 19, 2004 is withdrawn.

Specification

2. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: Delete all "may be" phrases and insert -- is/are --.

Claim Objections

3. Claims 1-30 are objected to because of the following informalities:
Claims 1, 8 and 26, line 1, delete "processor-based" and insert -- general purpose computer --because "general purpose computer" is the exact phrase used in specification, page 13.
Claims 4, 10, 16, 22 and 28, line 7, after ";" insert -- and --.
Claim 8, line 4, after ";" insert -- and --.
Claim 20, line 5, after ";" insert -- and --.
Claim 26, line 7, after ";" insert -- and --.
Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 and 26-30 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted step is the process of "determining the genome representation".

Claims 8-13 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted step is the process of "deriving the genome representation".

Allowable Subject Matter

5. Claims 14, 15 and 19 are allowed.

Conclusion

6. 35 U.S.C. rejection has been withdrawn because the a practical application has been established by the language in the specification. Such language is the general purpose computer to process a graph structure (Neural network) to find fit solution to reduce the time and cost associated with the evolving graph structure 200 (see specification, page 7, lines 23-30, page 13, lines 12-20 and figure 3).
